HUSSAM TARTEER

FULL-STACK DEVELOPER | SPRING BOOT + REACT
hussamcodes@gmail.com | +962 7 8835 1999 | Amman, Jordan | github.com/hustarico
hussamtarteer.netlify.app

SUMMARY

Full-stack developer building secure REST APIs, real-time systems, and responsive interfaces with Spring Boot and React. Completed a Spring Boot internship at ProgressSoft and currently leads web platform development for IEEE RAS UJ. Seeking a software engineering opportunity to contribute to real products and grow with an experienced team.

SKILLS

Backend:
Java, Spring Boot, Spring Security, JWT, JPA/Hibernate, WebSockets (STOMP), REST APIs
Data & testing:
MySQL, PostgreSQL, JUnit, Mockito, Docker
Frontend:
React, JavaScript (ES6+), HTML, CSS
Practices & tools:
SOLID, clean code, design patterns, OOP, Git/GitHub, Linux

EXPERIENCE

Software Development Intern - ProgressSoft **Aug 2026**

- Built two Spring Boot applications under mentor guidance using SOLID principles, clean code, and common design patterns.
- Wrote unit and integration tests with JUnit and Mockito; used PostgreSQL and containerized development environments with Docker.
- Participated in daily standups and hands-on technical reviews with senior engineers.

Webmaster - IEEE RAS UJ **Oct 2025 - Present**

- Lead the development, launch, and maintenance of multiple web platforms, including the branch's official React website.
- Delivered workshops on Python, Git/GitHub, problem solving, and Linux basics.

Technical Member - IEEE CS UJ **2024 - Present**

- Contributed UX improvements and bug fixes to the official IEEE CIS JU website and mentored peers learning full-stack development.

SELECTED PROJECTS

Echo - Real-time messaging backend **github.com/hustarico/echo**

- Built direct and group chat flows with Spring Boot and MySQL; secured access with Spring Security and JWT and enabled bidirectional messaging using WebSockets/STOMP.

AI-powered CCTV system - Service integration **github.com/hustarico/aeye-backend**

- Architected a Python AI service, Spring Boot backend, and React frontend; handled approximately 15 requests/second for near real-time image updates.

Geeks League backend - Production REST API **github.com/hustarico/geeksLeagueBackend**

- Built and deployed a Spring Boot and MySQL API serving live production traffic on Render.

Streakr - React productivity tool **streakr-study.netlify.app**

- Shipped streak tracking and session analytics with local-first persistence, no accounts, and no backend.

EDUCATION

B.Sc. Computer Information Systems - University of Jordan **2023 - Present**
GPA: Very Good
